

Stark County's Influenza Weekly Report

Week 7 (2/13/2022 — 2/19/2022)

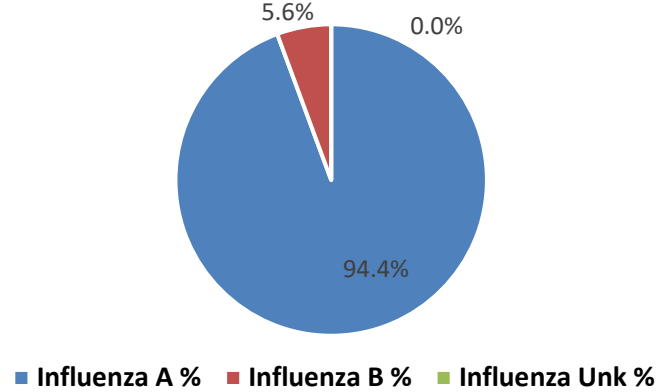

Public Health
Prevent. Promote. Protect.

During Week 7:

- Stark County had zero influenza-associated hospitalizations.
- Nationally, one influenza-associated pediatric death was reported.
- During Week 7, the following specimens were collected nationally from public health laboratories:

Type/Subtype	Week 5	% Week 7
Influenza A	365	99.7%
(H1N1)pdm09	0	0.0%
H3N2	92	100.0%
H3N2v	0	0.0%
The remainder were not subtyped		
Influenza B	1	0.3%
Yamagata	0	0.0%
Victoria	0	0.0%
The remainder were not subtyped		

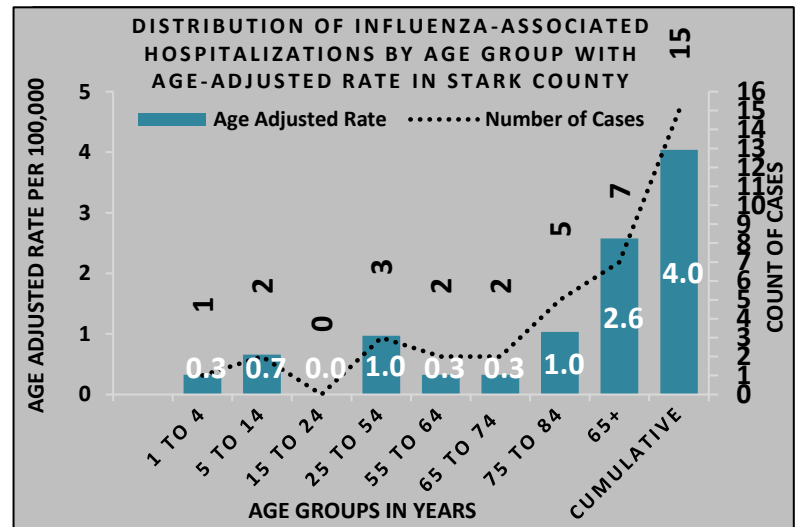

% of Specimens by Type Among Stark County Reported Influenza Cases

So Far this Year:

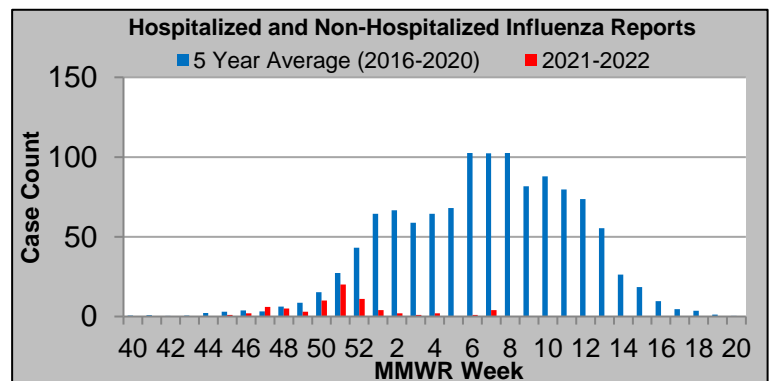

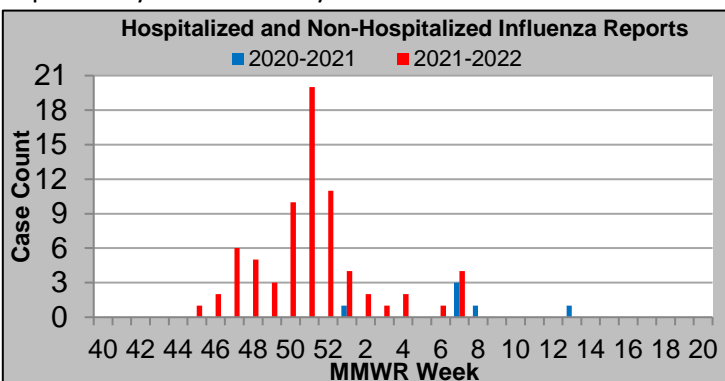

- There have been 15 influenza-associated hospitalizations in Stark County during this influenza season.
 - Hospitalizations range from 3 to 84 years old with the median age being 63 years old.
- The national cumulative rate of influenza-associated hospitalizations is 4.9 per 100,000.
- Nationally, six influenza-associated pediatric deaths have been reported so far this year.
- Up to Week 7, the following specimens were collected nationally from public health laboratories:

Type/Subtype	YTD	% YTD
Influenza A	12873	99.2%
(H1N1)pdm09	4	<0.1%
H3N2	8619	99.9%
H3N2v	1	<0.1%
The remainder were not subtyped		
Influenza B	98	0.8%
Yamagata	1	2.9%
Victoria	33	97.1%
The remainder were not subtyped		

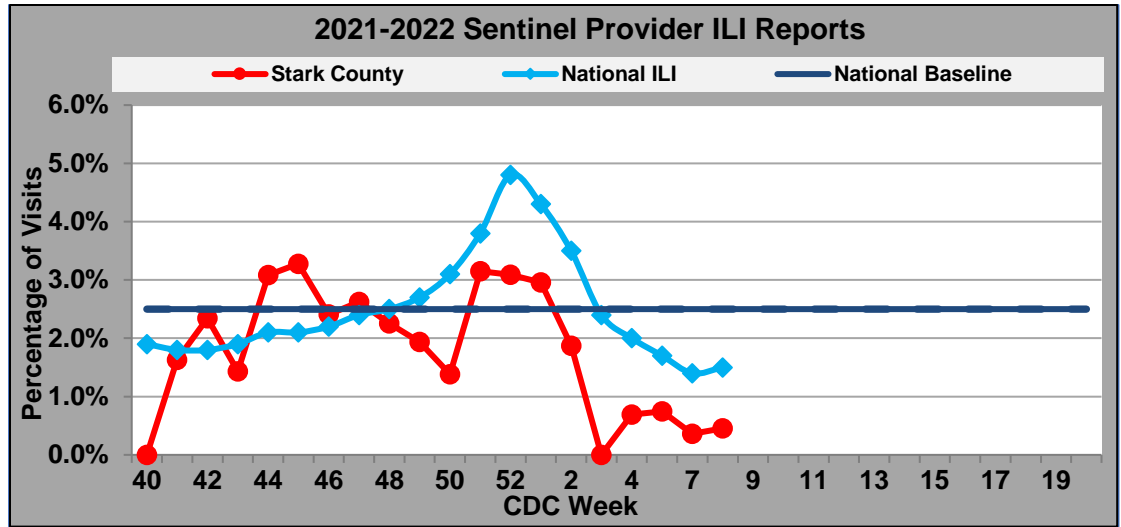

Graph 1A and 1B: Hospitalized and Non-Hospitalized Influenza Cases Reported to the Local Health Department.

There were four cases of hospitalized and non-hospitalized influenza reported for Week 7 in Stark County. Last year, there were three cases reported during this week. Stark County has reported 72 cases so far this year compared to the four cases reported by this time last year.

Graph 2: Sentinel Provider Reported Influenza Like Illness (ILI) in Stark County.

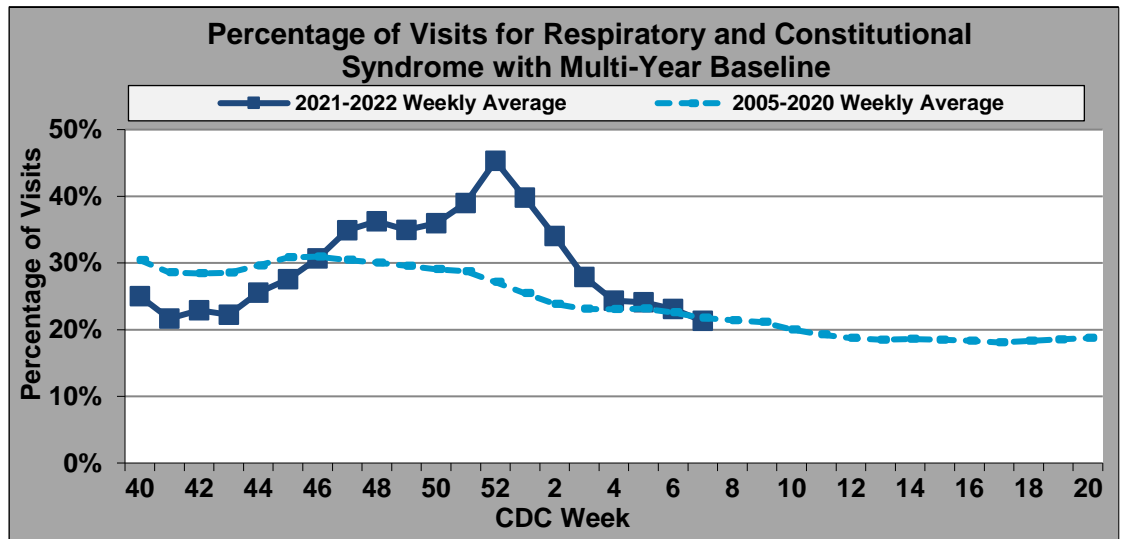

- ◆ During Week 7, Stark County Sentinel Providers reported that 0.45% of office visits were due to ILI. The national reports show that 1.5% of outpatient visits are due to ILI, which is below the 2.5% baseline.

Graph 3: Emergency Department Visits for Respiratory and Constitutional Syndromes.

(Source: Health Monitoring Systems, EpiCenter, Hospital and Stat Care Patient Registration Surveillance System)

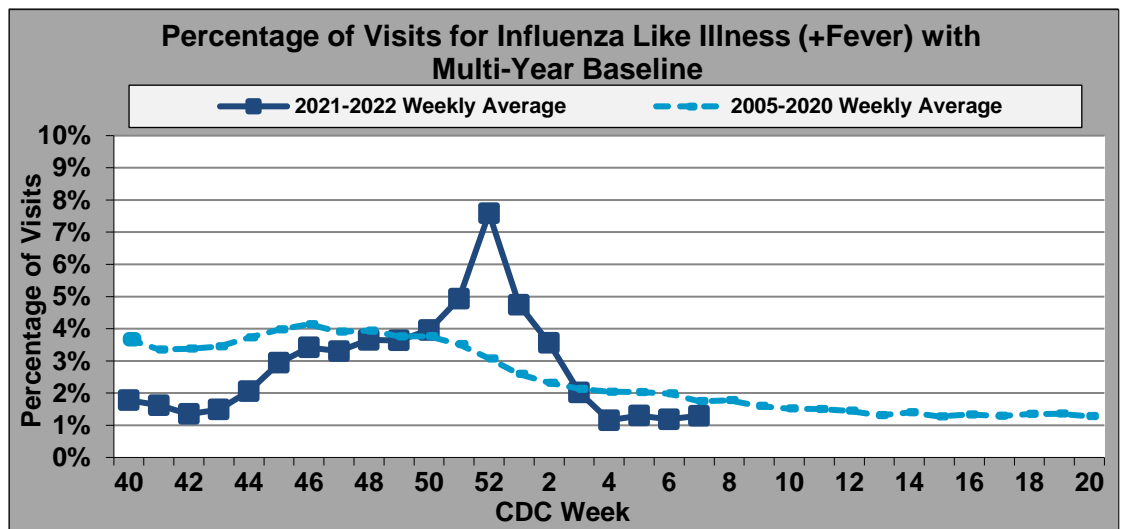

- ◆ ED and Stat Care visits for respiratory and constitutional syndrome were reported at 21.31% of ED visits, which is below the multi-year baseline average during Week 7.

Graph 4: Emergency Department (ED) Visits for Influenza Like Illness (+Fever).

(Source: Health Monitoring Systems, EpiCenter, Hospital and Stat Care Patient Registration Surveillance System)

- ◆ ED and Stat Care visits for ILI + Fever were reported at 1.29% of ED visits, which remained below the multi-year baseline average during Week 7.

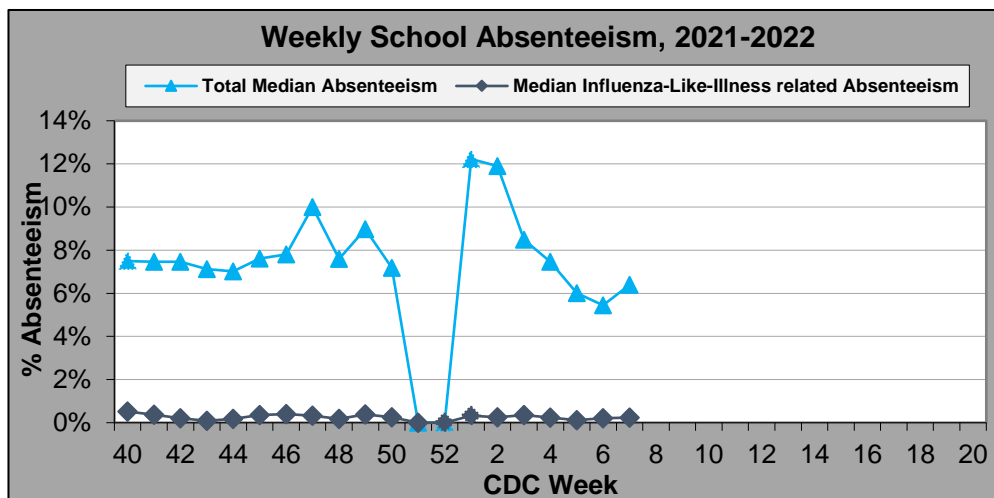

- All data presented in this weekly report are preliminary and may change as additional information is received.
- Multiyear averages included in this weekly report do not include the 2009/2010 H1N1 season.

Graph 5: Stark County School Absenteeism.

(Source: Voluntary reporting by multiple school districts throughout the county)

- ◆ During Week 7, Stark County schools reported a total median absenteeism of 6.40%. Absenteeism due to influenza-like-illness was reported at 0.23% of all absences.

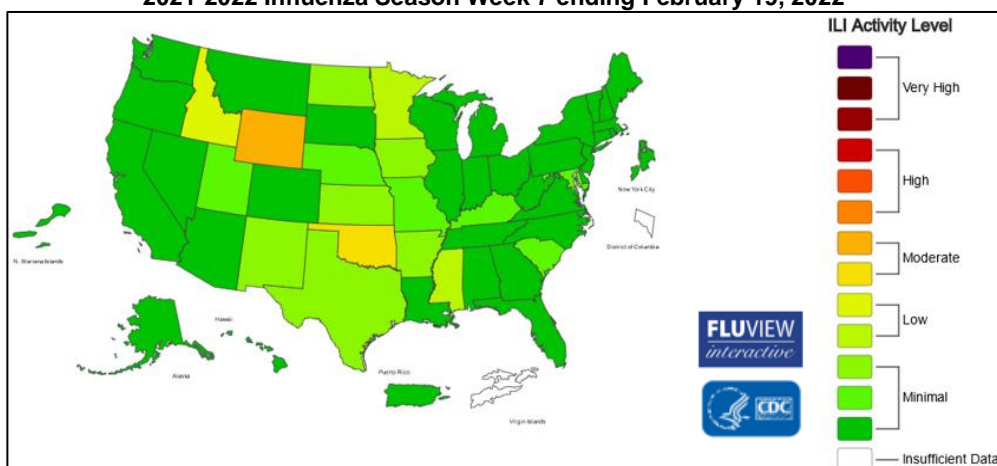

Map: ILI Activity Level Indicator Determined by Data Reported to ILINet.

(Data collected in ILINet may disproportionately represent certain populations within a jurisdiction or CBSA, and therefore, may not accurately depict the full picture of influenza activity for the entire jurisdiction or CBSA. Differences in the data presented here by CDC and independently by some health departments likely represent differing levels of data completeness with data presented by the health department likely being the more complete.)

**A Weekly Influenza Surveillance Report Prepared by the Influenza Division
Influenza-Like Illness (ILI) Activity Level Indicator Determined by Data Reported to ILINet**

This system monitors visits for ILI (fever and cough or sore throat), not laboratory confirmed influenza and may capture patient visits due to other respiratory pathogens that cause similar symptoms.

2021-2022 Influenza Season Week 7 ending February 19, 2022

For 2021-2022, the influenza report will include the visual representation of ILI activity as a replacement for the visual of geographic spread of influenza as assessed by State and Territorial Epidemiologists. This is due to the CDC suspending the system used for this reporting. Data collected in ILINet are used to produce a measure of ILI activity by state/jurisdiction and Core Based Statistical Areas (CBSA).

Geographic Spread of Influenza as Assessed by State and Territorial Epidemiologists

Due to the impact of COVID-19 on ILI surveillance, and the fact that the state and territorial epidemiologists report relies heavily on ILI activity, reporting for this system will be suspended for the 2021-2022 influenza season. Data from previous seasons is available on FluView Interactive.

- All data presented in this weekly report are preliminary and may change as additional information is received.
- Multiyear averages included in this weekly report do not include the 2009/2010 H1N1 season.
- If you have any questions please contact Chelsea Sadinski 330.489.9914 or sadinski@starkhealth.org or Amanda Archer at 330.438.4646 or aarcher@cantonhealth.org
