

Ohio Seasonal Influenza and Influenza-like Illness Surveillance
2009-2010 Season, beginning August 30, 2009

MMWR Week 10
March 7-13, 2010

Media Talking Points

Activity Level: **Sporadic Activity**

- Definition: Small numbers of laboratory-confirmed influenza cases or a single laboratory-confirmed influenza outbreak has been reported, but there is no increase in cases of ILI.

Summary: Public health surveillance data sources indicate a decrease in confirmed influenza-associated hospitalizations. Levels of influenza-like illness in outpatient settings reported by Ohio's sentinel providers, the percentage of emergency department visits with patients exhibiting constitutional symptoms, and over-the-counter drug sales (particularly thermometer sales) remain below baseline levels statewide.

State Surveillance Data:

- Influenza-like Illness (ILI): Sentinel Providers reported 0.42% of patients had ILI signs and symptoms. Influenza-like Illness is defined as a fever ($\geq 100^\circ$ F), **and** cough and/or sore throat. Temperature can be measured in the physician's office or at home.
- Over-the-counter (OTC) sales experienced a statistically significant deviation from the expected in two regions.
- Emergency department visits experienced a statistically significant deviation from the expected in three regions.
- ODH lab reported results for those cases that are PCR positive for seasonal influenza. Positive results: (1) influenza A/H1, (1) influenza A/H3 (total through 3/15/10).
- Ten confirmed influenza-associated pediatric mortality reports have been reported in the 2009-2010 season: one from Athens County, three from Cuyahoga County, one from Fayette County, two from Franklin County, one from Henry County, one from Summit County, and one from Warren County. Seven of these mortalities had confirmed pandemic (H1N1) 2009 infection (through 3/16/10).
- Incidence of confirmed influenza-associated hospitalizations in 2009-2010 season: 3235, of which 1484 are laboratory confirmed as Pandemic (H1N1) 2009 Influenza (as of 3/17/10).
- Incidence of confirmed influenza-associated hospitalizations since beginning of reporting requirements (1/1/2009): 3864, of which 1553 are laboratory confirmed as Pandemic (H1N1) 2009 Influenza. See Pandemic (H1N1) 2009-related hospitalizations graph (as of 3/13/10).
- Confirmed Pandemic (H1N1) 2009 Influenza-related deaths among hospitalized patients since April 2009: 51
- Cumulative influenza and pneumonia (P & I) deaths reported via the Electronic Death Registration System (EDRS): 3974, of which 102 are presumed to be influenza.

National Surveillance Data:

- During week 9 (February 28-March 6, 2010), influenza activity remained at approximately the same levels as last week in the U.S.
- Nationwide during week 9, 1.9% of patient visits reported through the U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet) were due to influenza-like illness (ILI). This percentage is below the national baseline of 2.3%. Three of 10 regions (Regions 4, 7, and 9) reported ILI above region-specific baseline levels. Ohio is in Region 5 (IL, IN, MI, MN, OH, WI).
- During week 9, 7.7% of all deaths reported through the 122-Cities Mortality Reporting System were due to pneumonia and influenza (P & I). This percentage was below the epidemic threshold of 7.9% for week 9.

Analysis Considerations:

- Influenza-associated hospitalization became a reportable condition on 1/1/09. Therefore, only cases that were entered after 1/1/09 will be considered for analysis purposes.

National activity levels and more information can be found at the following CDC pages:

*Please note:

- Lab data is based on county of provider that submitted specimen.
- Data is from tests conducted at the ODH lab (commercial lab results are not included).

Confirmed Pandemic (H1N1) 2009 Influenza-related Hospitalizations,
by Event Date*, as of 3/13/2010 (n=1553)

Data Source: Ohio Disease Reporting System, data pulled 3/17/10 at 2:30 pm
*Event date is the first date associated with the case, usually date of illness onset.
