

Today's date is September 3, 2010.

The samples were collected at 7:45 am.

When the samples were collected it was partly cloudy, 72 degrees, with 27% humidity. There was a breeze from the East, and no rain had fallen.

Today's pollen count is 175 per cubic meter of air (m³). The prevalent species are Ragweed (90%) and Plantain (5%), with miscellaneous seasonal weeds (5%) making up the remainder.

The mold count is 4,020 per cubic meter of air (m³). Cladosporium made up 20% of the total count, and Epicoccum 5%.

The Air Quality Index is 74, which is classified as Moderate. The primary pollutant is Ozone.

Pollen counts are rounded to the nearest 5/m³. Mold counts are rounded to the nearest 10/m³. Counts are taken for the previous 24 hours, Monday morning through Friday morning, and represent an hourly average. Actual levels at any particular time throughout the day may be higher or lower than the average count. Visit the *Laboratory* section of www.cantonhealth.org for more information on pollen and mold levels.
