

Stark County's Influenza Weekly Report

Week 19 (5/7/17-5/13/17)

During Week 19:

- Stark County had zero additional influenza-associated hospitalizations.
- Nationally, one influenza-associated pediatric deaths were reported, none from Stark County.

So Far this Year:

- There have been 322 influenza-associated hospitalizations in Stark County.
 - Those hospitalized for influenza have ranged from 3 weeks to 100 years of age.
 - The median age for those hospitalized is 70 years.
- The national cumulative rate for influenza-associated hospitalizations was 64.7 per 100, 000 population.
- Up to week 19, 31,518 specimens collected nationally from public health laboratories were typed influenza A. This was 78.7% of all specimens collected. Of these, 2.8% subtyped as the 2009 H1N1 virus, 96.2% subtyped as the H3 virus, and subtyping was not performed on the rest of them.
- Nationally, 92 influenza-associated pediatric deaths were reported so far this year. Last year there was a total of 92.

% of Specimens by Type Among Stark County Reported Influenza Cases

Viruses Circulating vs. Viruses in this Year's Vaccine:

- Nationally since October 1, 2016, 1,015 specimens were characterized as Influenza A.
 - There were 738 influenza A (H3N2) viruses collected and 95.1% matched the influenza A (H3N2) component in this year's vaccine. There were 277 influenza A (H1N1) viruses collected and 99.3% matched the influenza A (H1N1) component in this year's vaccine.
- Nationally since October 1, 2016, 693 specimens were characterized as Influenza B.
 - Of these, 370 subtyped from the Yamagata Lineage and 323 subtyped from the Victorian Lineage. Of these specimens, 100% of the Yamagata Lineage matched the Influenza B component of the 2016-2017 vaccine and 87.3% of the Victorian Lineage matched.

⇒ **According to the MMWR published on February 17, 2017, this year's influenza vaccine is 48% effective.** This is from data collected from November 28th, 2016 until February 4th, 2017 from a group of 3,144 children and adults. According to the Centers for Disease Control and Prevention these interim estimates indicate that influenza vaccination reduced to the risk for outpatient medical visits by almost half.

* All data presented in this weekly report are preliminary and may change as additional information is received.

* Multiyear averages included in this weekly report do not include the 2009/2010 H1N1 season.
